Nathan Langer

Full Stack Developer

(Laravel 6-9, PHP 7/8, LESS, SCSS, Laravel Livewire, Alpine JS, SQL, Tailwind CSS, npm, Linux, Laravel octane)

Personal Profile

I have been working as a website developer within the computing sector for many years in both front-end and back-end development. I have created a range of websites personally as a freelance and under my most recent employment at Quuu Ltd. I worked as part of the development team at Quuu to completely redesign and rebuild the Quuu & Quuu Promote Apps. Since leaving Quuu I have developed Apollo Uptime Monitor and a range of other smaller websites.

Work Experience

AW Aluminium: November 2021 - Present

At AW Aluminium I perform a range of tasks to help the company operate more efficiently from a technical point of view. I have developed a QMS (quality management system) to a standard of ISO 9001:2015 that is used by all employees in the company to order goods, track deliveries, track vehicles, track job information, generate RAMS and much more. I work to maintain this system on a daily basis and to add new features when requested. The system is built in Laravel and utilises Laravel livewire, alpine js, LESS & tailwind for base styling.

Quuu Ltd: OCT 2018 – JAN 2020

During my employment at Quuu I was responsible for the complete re-design and development of the Quuu and Quuu Promote applications. I worked to improve the functionality, speed and responsiveness of the apps and websites. As part of the development structure we used Git to manage code updates for the apps, using Pull requests and code reviewing to make sure issues in production were kept to a minimum. I was also pro-actively seeking and fixing bugs with the help of Laravel telescope on the Quuu apps.

Centurion Europe: JUN 2018 – OCT 2018

During my time at Centurion Europe I was in charge of all the websites and micro-sites run by the company. I helped to implement a new task management structure in the form of Jira on an in house dedicated LAMP stack server. I cut hosting costs by moving the Wordpress and magento websites onto the dedicated server.

Skillset

- I am fluent in Laravel 6-9, php 7/8, LESS, SCSS, jQuery, SQL, Tailwind, Laravel Livewire, Linux, JSON RESTful API's & Laravel octane
- I am currently teaching myself how to SPA's using Vue, and how to make desktop apps using electron JS.
